Examen de l'École d'Été de Physique Théorique

Session 1956

Claude Cohen-Tannoudji

Écrit : Discussion de la preuve de l'existence des moments magnétiques octupolaires.

I read with pleasure the excellent exam of Monsieur Claude Cohen-Tannoudji. He did very well in this report and showed very good ability at understanding and organizing the material in a clear fashion. His report was also well written although, of course, I am in no position to comment on the literary qualities of his French. If this exam had been submitted to me here, I would have given it a grade of at least A- and probably of A, which is the highest of the grades, A, B, C, D and E which we normally use.

Norman F. Ramsey
Harvard University.

Oral :

Possède de solides connaissances en mécanique quantique, mais aurait gagné à faire un exposé plus ordonné ~~en~~ mettant en lumière les points importants.

C. Bloch, C.E.N. Saclay
